1. External Library Used

In file 'homepage.php':
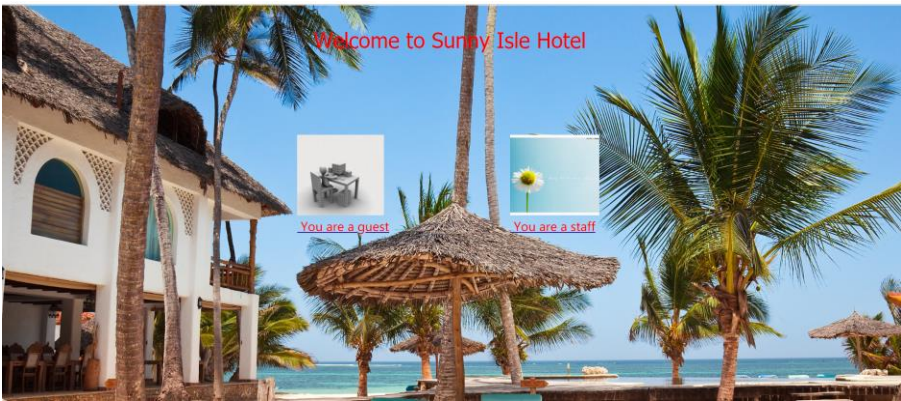

```
<script src="https://code.jquery.com/jquery-3.1.1.min.js"></script>
```

https://code.jquery.com/jquery-3.1.1.min.js

2. HMS system

For staffs:

a. They access the web site 'index.html' through the hotel's facilities.
b. Then They can choose their identity to enter.

c. If they enter as a staff, they could manage the book state and search specific room.

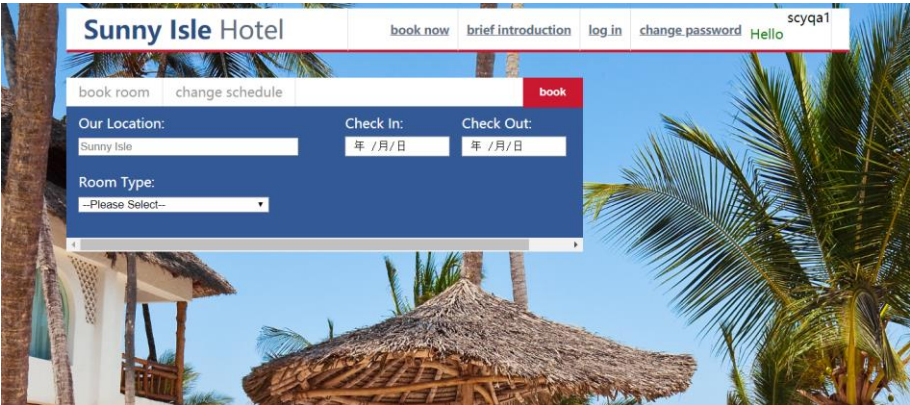

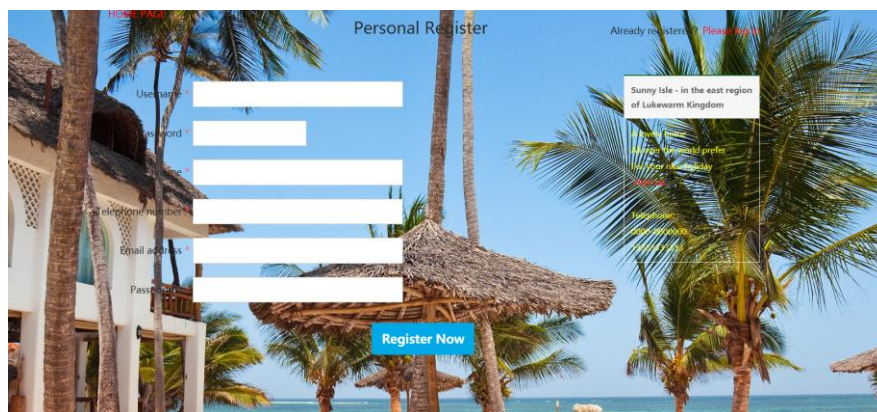

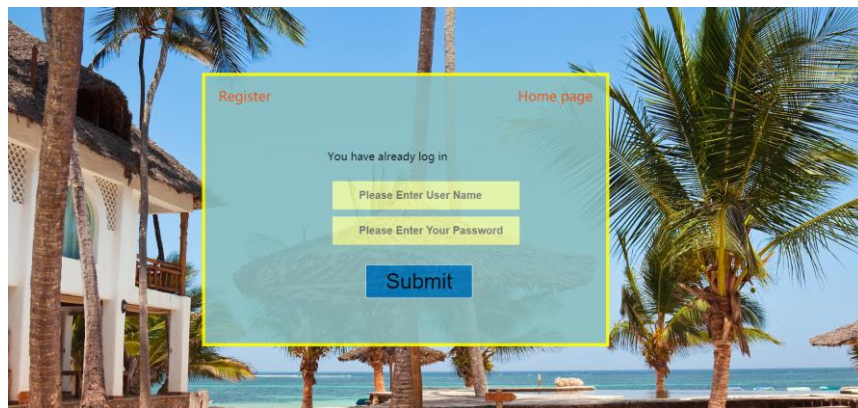

For guests:

a. They enter the HMS system directly by enter the page 'homepage.php'.

b. They could register or log in.

c. If they enter wrong information, the system will be prompted accordingly. For example:

d. After logging in, they could change personal information such as password.
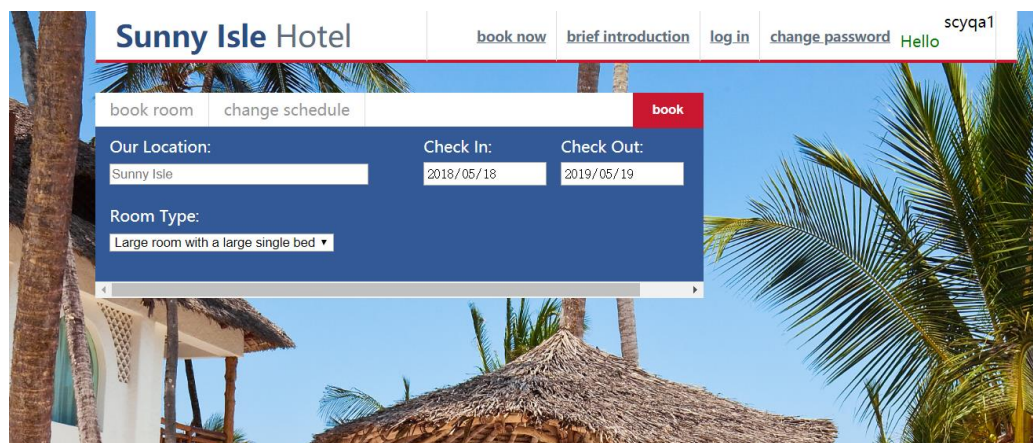

e. Before booking, they can browse relevant room type information.
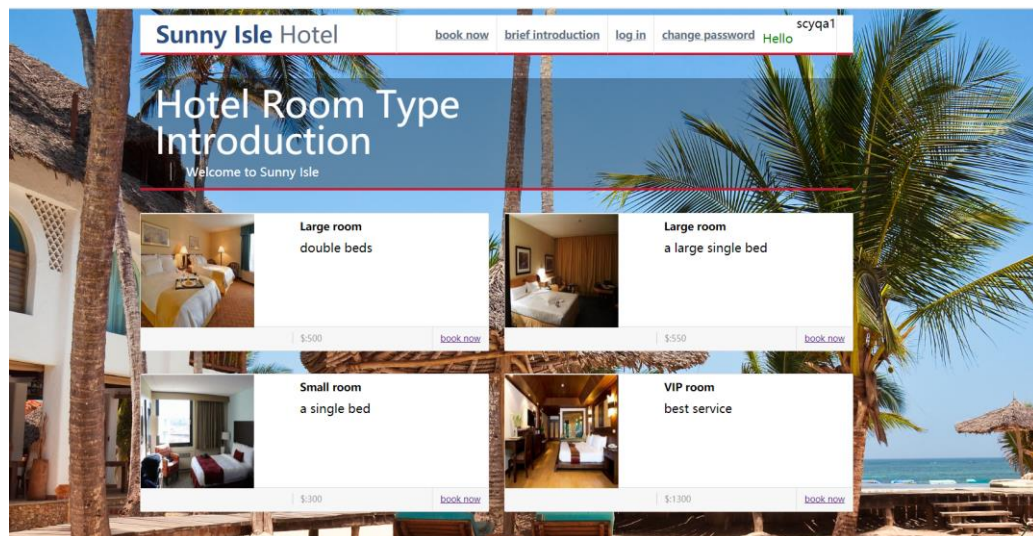

f. Then they type check in and check out date and what room type they want to book a room and receive relevant error message.

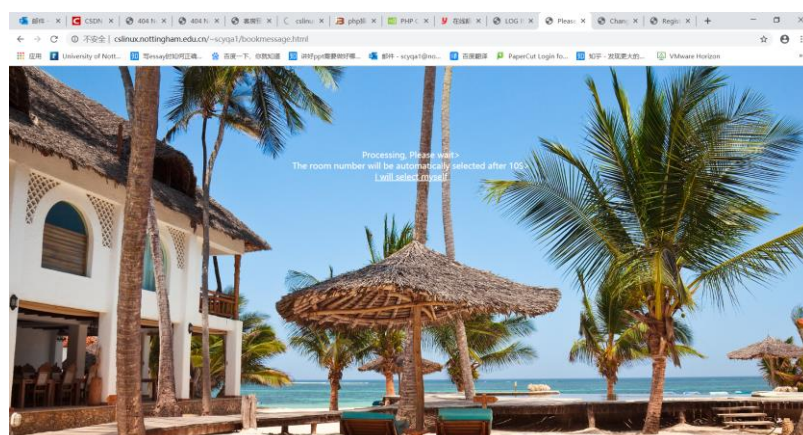

g. Then jump to a new page.
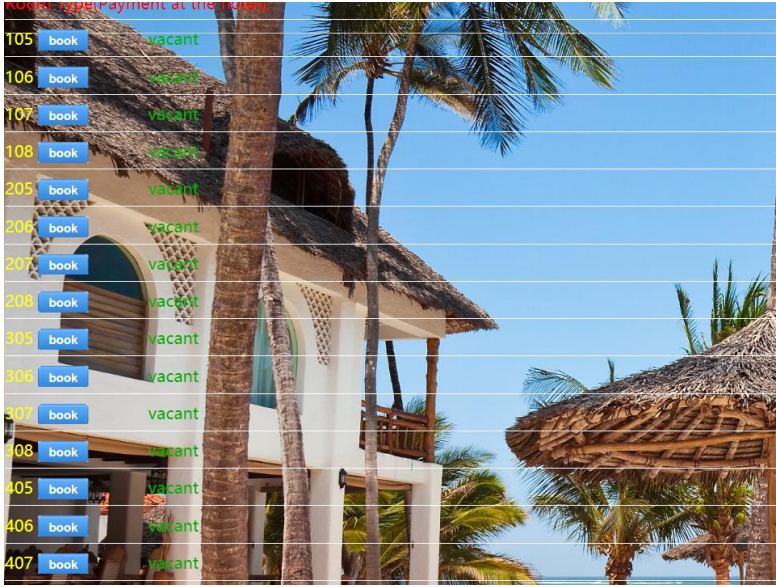

h. If they choose room number themselves, they need to click. Else, random room number will be chosen (a lower floor).
